

Publications

The Center publishes two monograph series. In 2016, CGSR inaugurated the Livermore Papers on Global Security, which provides in-depth analysis of major emerging challenges in the security environment and their implications. The Occasional Paper monographs highlight the state of the conversation on an important topic at a particular moment in time. These are available both in hardcopy upon request or online at the CGSR website.

Mission

The Center for Global Security Research (CGSR) was established at Lawrence Livermore National Laboratory (LLNL) in 1996 to serve as a bridge between the science, technology, and national security policy communities. It focuses on emerging national security challenges in the areas of deterrence, assurance, and strategic stability, as well as global challenges such as disruptive technologies, climate change, biosecurity, and non-proliferation.

The Center's work is conducted on an entirely unclassified basis. It is also multidisciplinary and entirely nonpartisan in character.

CGSR's Lines of Effort

- **Listen and Learn:** convenes seminars with outside speakers to better understand national policy priorities and national and international developments that bear on the Lab's missions
- **Support:** provides analysis and expertise to Laboratory leadership in support of strategic planning and national leadership in policy development and implementation
- **Intellectual Leadership:** convenes workshops, commissions research, and generates publications aimed at advancing thinking about contemporary and emerging national security challenges related to strategic conflict

A Word from the Director

"CGSR has sought to help restore strategic fluency, to out-think and out-partner, to develop new concepts, and to grow the needed intellectual capital."

Brad Roberts, *CGSR Director*
